PERMANENT HAIR REDUCTION FOR ALL SKIN TYPES

THE OLD SOLUTIONS

If you live with unwanted hair, you've probably tried some of the typical solutions, such as shaving, waxing, and electrolysis. If so, you've also found that:

- Shaving is a daily nuisance.
- Waxing is painful and only a short-term solution.
- Electrolysis is effective, but since it only treats one hair follicle at a time, it's not practical for large areas and is extremely time-consuming.

THE PULSED LIGHT ALTERNATIVE

Our pulsed light system offers a lasting solution for unwanted hair.

- **Permanent:** Concentrated pulses of light loosen the hair and disable the cells responsible for new hair growth.
- **Fast:** Small areas, such as the underarms or upper lip, can be treated in 10 minutes or less, and even large areas, like the back or legs, can be treated in under a half hour.
- **Comfortable:** Various cooling methods keep the light pulses mild and skin safe, allowing for more comfortable treatments than electrolysis and waxing.
- **Convenient:** Unlike waxing, there is no need to let hair grow out between treatments. You can remain hair free all the time.

FREQUENTLY ASKED QUESTIONS

HOW DOES PULSED LIGHT WORK?

Our system uses specialized handpieces which filter light from different parts of the spectrum. Different treatments such as hair reduction, sun spot removal, or leg vein clearance require light of different wavelength bands. The hair removal handpieces emit pulses of light into the hair follicles. The light is absorbed by the pigment in the follicles and converted to heat. The heat then loosens the hair and disables the cells responsible for growing new hair.

HOW IS PULSED LIGHT DIFFERENT FROM A LASER?

Pulsed light systems and lasers are very similar, but our pulsed light system uses a much larger treatment window than most lasers. This spreads light over a wider area of skin and allows faster coverage of the skin and quicker treatments as a result.

WHAT BODY AREAS CAN I GET TREATED?

Any area, except around the eyes. The upper lip, face, neck, underarms, bikini line, legs, chest and back can all be treated.

WHAT ARE THE TREATMENTS LIKE?

We will move the handpiece over your skin, pulsing it all the while. Each pulse will send a beam of light through your skin. A flashing light, an audible tone, and a mild sensation on the skin will tell you when the handpiece is being pulsed. Our handpieces are uniquely designed with a chilled fluid supply that runs through the tip of the handpiece. This cools your skin during treatment, increasing comfort, safety, and effectiveness of our treatments.

WHAT SHOULD I EXPECT AFTER TREATMENT?

- Immediately after treatment, you can expect a mild sunburn-like sensation, possibly accompanied by some minor swelling. This usually lasts 2-24 hours, and can be soothed with cold gel or ice packs.
- The treated hair will continue to appear for 7-30 days post-treatment. This is not new hair growth, but the treated hairs being expelled from the skin.
- At any given time, some of your hair is not in a phase of active growth. Therefore you will need more than one treatment to affect the growth of all your unwanted hair.
- Typically, several treatments will be necessary to achieve permanent hair reduction.

OTHER LASER AND LIGHT TREATMENTS OFFERED AT KINGSWAY DERMATOLOGY

In addition to hair removal, we offer treatments such as non-ablative skin resurfacing for scars and wrinkles, photorejuvenation, treatments for the clearance of rosacea, sunspots and other vascular and pigmented lesions, fractional skin tightening, leg vein clearance, treatment of stretch marks, and more.

Our treatments are customized to the unique needs of our patients by our expert group of dermatologists. Kingsway Dermatology and Cosmetic Centre is committed to delivering comprehensive skin care for all of our patients' medical and cosmetic needs. We are skin experts, and offer cutting-edge strategies in prevention, treatment, enhancement and rejuvenation.
